## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a method of percutaneously implanting a first component and a second component of an orthopedic assembly into a body for a patient, classified in class 623, subclass 16.11.
- II. Claims 8-13 and 21-25, drawn to an instrument assembly, classified in class 606, subclass 104.
- III. Claims 14-20, drawn to a method of percutaneously securing a bone plate to a bone within a body of a patient, classified in class 606, subclass 69.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced with a different apparatus, e.g. an assembly having first and second instruments that do not have alignment features.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

inventions are not disclosed as use together and they have different effects, e.g. Invention I is for percutaneously implanting a first component and a second component of an orthopedic assembly into a body and Invention III is for percutaneously securing a bone plate to a bone.

Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practice with a different apparatus, e.g. an assembly having first and second instruments that do not have alignment features.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for some Groups are not required for other Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
